Your pack should consist of the following components:

- 5x Screws
- 5x Plugs (Masonry)
- 1x Child Safety Device
- 2x Brackets

**STEP 1 – Select Your Mount & Measure Your Window** (FIG.1)

**FACE MOUNT:** This blind is installed outside the window frame
1. With Architrave; take the external width measurements, including the architrave
2. Without Architrave; take the width of the opening and add an extra 100mm

**RECESS MOUNT:** This blind is installed inside the window frame; take 3 width measurements to determine if the window is square. If it’s not, use the smallest measurement

- Once you have selected your mount, measure the length and width of your window to ensure the correct size blind has been selected for your installation type

**STEP 2 – Side Chain and Roll Type**

- Select whether you want a front roll (FIG.2) or a back roll (FIG.3)
- Decide if you want the ball chain mechanism to operate from the left hand side or the right* and insert into the tube on the chosen side
- Insert the pin end into the opposite side (FIG.2 or 3)

**STEP 3 – Bracket Positioning**

- Using the bracket as a template, measure and mark the position including the fixing point locations (refer to FIG.4 for placement)
- Pre-drill pilot holes for screws to prevent any splitting of timber or architrave

**STEP 4 – Fix Brackets**

- Secure brackets to wall, ceiling, or architrave using screws provided
- Plugs may be required if the blind is being mounted into plasterboard or masonry
- Ensure the brackets are installed in the right positions. Match the tab bracket with the chain side and the hole bracket with the pin side (FIG.2+3)

**STEP 5 – Install Blind**

- Align the centre of the chain mechanism to the tab on the bracket and insert (FIG.5)
- Turn the flywheel anti-clockwise to retract the pin. Align the retracted pin with the hole in the bracket. Once aligned, turn the flywheel clockwise to release the pin securely into the bracket.
- For larger size blinds, a two-person lift may be required

**STEP 6 – Child Safety Device**

- Secure the child safety device (FIG.6) on the wall with the supplied screws (refer to safety warning for more information)

*If you wish to change sides later down the track, simply pull the mechanism out and swap the chain with the pin end.
